Водещо решение за справяне с широколистните плевели при пшеница и ечемик от Синджента - Cameo Max.

Автор(и): syngenta, България
Дата: 22.02.2022 *Брой:* 2/2022

Cameo Max is a selective systemic herbicide that has exceptionally high efficacy because it is equally well absorbed by the leaves and roots of the weeds.

A combination of two active substances that have an exceptionally good synergy of action with each other. This contributes to excellent control of a broad spectrum of annual broadleaf weeds, including those resistant to 2,4-D in wheat and barley.

ISSN 2815-522X

At a rate of 4 g/da, **Cameo Max** controls broadleaf weeds such as wild mustard, henbit, chamomile, corn poppy, shepherd's purse, lamb's-quarters, cleavers, creeping thistle, violet, chickweed, volunteer conventional oilseed rape and conventional sunflower, etc. A few days after treatment, the first visible symptoms appear – the weeds turn yellow, after which they completely die within 10–15 days after treatment; during this period they do not compete with the crop for nutrients and light.

Cameo Max is extremely selective to the crop. It can be applied from the 2-leaf stage up to the emergence of the flag leaf of the crop.

Cameo Max can be applied at temperatures from 5 degrees Celsius.

Cameo Max is a two-component solution for more sustainable production!

From this season you can purchase **Cameo Max** in a package with Amistar Prime at a significantly better price!
