

# International Field Days 2019

Author(s): Растителна защита  
Date: 27.05.2019 Issue: 5/2019

*For the second consecutive year, the international Field Days will be held from 30 May to 1 June on the experimental fields of the Agricultural University in Plovdiv.*

The concept of the exhibition in Plovdiv in 2019 broadens the range of participants presented. In addition to cereal crops, vegetable crops will also have a leading place, along with a wide range of different plant protection products, fertilizers and agricultural machinery.

The aim of this year's edition of the International Field Days is to initiate a practical exchange of information between agricultural producers and suppliers of modern technologies in the agricultural sector.

## Field Days

Field Days are a well-established innovative platform and a meeting place for farmers, consultants, manufacturers and distributors of seeds, fertilizers, plant protection products and machinery. Modern plant varieties, new production inputs, improved cultivation methods, live demonstrations of agricultural machinery, as well as the latest breakthroughs in scientific research are presented.

The International Field Days in Bulgaria are held near Plovdiv on the experimental fields of the Agricultural University in Plovdiv, located 150 kilometers southeast of the capital Sofia and 1 km southeast of Plovdiv (Tsarigradsko Shosse) in the center of the fertile Maritsa River valley – one of Bulgaria’s most important production areas for various cereal and oilseed crops, fruits and vegetables.

The event is organized by IFWexpo Heidelberg, a subsidiary of DLG (the German Agricultural Society), which has many years of experience in organizing similar events in various countries. The German society is also the creator of the well-known Hanover agricultural machinery fair “Agritechnica”. The main partner of the international exhibition is the Agricultural University in Plovdiv, which has a modern infrastructure and a professional team.
