The market presence and key positions of the Bulgarian company "Ecofol" in the production and trade of foliar fertilizers is an indisputable fact. The company's management team possesses three key factors for growth: product quality, highly professional agronomic consultation, and fast and adequate delivery.

2014 proved to be a very special year for "Ecofol". This is the year the company celebrates 25 years since its establishment. The year in which the largest investments were made in the technological and energy modernization of production at the plant in Targovishte, seven key employees reached the venerable age of 60 and began their second 60-year life mandate.

Having passed through all the economic, social, and political nightmares of the transition, today the 25-year-old Ecofol - a symbol of reasonable, balanced, and highly effective management, of full commitment to the users of Lactofol products, of loyalty and care towards the company's employees - took its next serious step. It implemented two European projects: "Energy Efficiency" and the Operational Program "Development of the Competitiveness of the Bulgarian Economy". New equipment was purchased, significantly improving the energy efficiency and competitiveness of the company "Ecofol".
