

Now is the time... to get more money during harvest!

Author(s): Растителна защита
Date: 03.06.2021 *Issue:* 6/2021

The forecasts of leading analysts of the agro market from recent days are on the way to becoming reality. Numerous data and analyses show that for the first time in many years exceptionally high purchase prices for wheat, rapeseed, sunflower and maize are expected, not only in Bulgaria, but also in Romania.

Amalgerol and **Amalgerol Essence** are among the few products on the market that can increase both the quantity and the quality of the yield. This has been scientifically proven by the Agricultural University – Plovdiv and the Institute of Plant and Genetic Resources – Sadovo through trials with the biostimulants **Amalgerol Essence** at a rate of **200 ml/da** and the classic **Amalgerol** at a rate of **300 ml/da**.

For long-standing clients who have been convinced by the production results from the application of the biostimulants **Amalgerol** and **Amalgerol Essence**, it is not difficult to make the right decision: those who have carried out the first spraying are currently performing the second. For all others who have not done so, **hurry up!** Now is the time for treatment of sunflower, maize and rapeseed.

At the moment, forward contracts are being concluded at the following approximate prices: for wheat and maize at 200 euros per ton; sunflower at 450 euros per ton; rapeseed at 750 euros per ton. It is evident that such levels have a stimulating effect on farmers and they are looking for all possible ways to increase their harvest. Our **categorical decision** is treatment with **Amalgerol** or **Amalgerol Essence**. This will by no means be an expense, but a guaranteed **investment** for a higher and better-quality yield!

Additional information and advice on the use of **Amalgerol** and **Amalgerol Essence** can be found at the following links:
