Date: 19.09.2021 *Issue:* 9/2021

Belkar™ is a new herbicide for autumn vegetative treatment of oilseed rape.

With its two active substances Arylex™ active and Picloram, Belkar™ sets a new standard for autumn control of all significant broadleaf weeds. Belkar™ EC delivers excellent results in weed control even against cruciferous species, which provides an undeniable advantage over competing products. With its unique formulation containing the new active substance Arylex™ active, Belkar™ is resistant to large temperature amplitudes and can be applied at temperatures from 5°C, thus enabling farmers to have a reliable partner in the fight against weeds without worrying about weather conditions.
