SUMI AGRO

неутрално
кисело pH алкално

ФИКСЕРТОП pH
pH БУФЕР
1 л/1 тон вода = pH 5 на разтвора

The active substances of a large proportion of pesticides (especially insecticides) are sensitive to the pH of the water in which they are dissolved. When they are placed in an unsuitable environment (pH), they undergo degradation, as a result of which they lose their effectiveness.

Acidifying the solution preserves the stability of the active substances used = your investments are preserved.

Fixertop pH is an innovative pH buffer, which is the latest addition to the portfolio of **Summit Agro**.

Unlike standard pH regulators, the buffer ensures a pH of 5 of the solution at a rate of 1 litre of **Fixertop pH** per 1 ton of water, regardless of its initial parameters.

The use of **Fixertop pH** leads to better solubility of the products, as well as to easier and faster uptake of nutrients by the plants.

Another advantage of Fixertop pH is that it also acts as an antifoaming agent and wetting agent.
