

Small click beetle - *Agriotes sputator* L.

Author(s): Растителна защита
Date: 05.04.2015 *Issue:* 4/2015

The small field click beetle is widespread and is one of the most dangerous pests from the family *Elateridae* in our country. It damages almost all agricultural crops, including a large number of vegetable species.

The adult insect is 6-8.5 mm long. It is colored light brown to reddish-brown. The larva is 16-18 mm long, light yellow, and has a sharp projection on the last abdominal segment.
