

BE PREPARED FOR CHANGEABLE WEATHER: RELY ON THE POWER OF AMALGEROL ESSENCE

Author(s): Меди плюс Р

Date: 19.05.2023 *Issue:* 5/2023

The month of May brings frequent rainfall, which is of vital importance for the development of cereal crops. However, abundant rains during grain filling can prove unfavorable for the plants if no preventive measures are taken.

Following the frequent rains of recent days, a warming of the weather is expected. Unfortunately, the rise in temperatures in combination with the changing meteorological conditions may trigger the occurrence of various diseases such as yellow and brown rust, powdery mildew, etc.

These diseases can hinder the development of the crops, and the expected yield reduction in such cases is around 30%.

In order to effectively cope with these challenges, it is extremely important for farmers to monitor the development of wheat. The most appropriate solution during these periods of warm and humid weather is treatment of the plants with **Amalgerol Essence** at a rate of 200 ml/da (or **Amalgerol** at a rate of 300 ml/da) together with a fungicide. With this approach, farmers can achieve remarkable success and protect their crops from the harmful impact of diseases.

Why does AMALGEROL ESSENCE work so well?

When treatment is carried out in May with **Amalgerol Essence**, a significant improvement in the habitus of the crops is observed thanks to the 7-component composition of the product, which leads to:

- improving soil structure, moisture retention and activation of soil life;
- promoting root growth, which allows better access to nutrients in the soil;
- the plants acquire an intense green color and an extension of their life cycle is achieved;

КАК ДЕЙСТВА?

- Удължава жизнения цикъл на пшеницата
- Засилва растежа на корените
- Задържа влагата

Why is this beneficial?

The plants receive sufficient nutrition for a longer period of time, which results in higher yields at harvest.

Amalgerol Essence enables crops to develop to their full potential even under challenging meteorological conditions.

Bulgarian farmers should not allow external factors to hinder the successful development of their crops.

TAKE ADVANTAGE OF THE POWER OF AMALGEROL ESSENCE AND UNLOCK THE TRUE POTENTIAL OF YOUR HARVEST!
