

# Фокстрот® 69 EW – high selectivity and excellent control of grass weeds

*Author(s):* ФМС АГРО БЪЛГАРИЯ

*Date:* 19.11.2023 *Issue:* 11/2023

Highly effective selective herbicide for the control of annual grass weeds in wheat and barley.

A key product offered by FMC, proven over recent years.

The advantage that distinguishes Foxtrot® 69 EC from the other grass herbicides on the market in terms of quality is the added safener – cloquintocet-mexyl, which is a new generation and ensures excellent selectivity for the crops, protecting them from herbicide stress.

Foxtrot® 69 EC provides excellent control of major grass weeds such as wild oat, blackgrass, millet species, brome grasses, loose silky-bent and many others. It is applied at a rate of – 100 ml/da. Maximum efficacy is achieved when the product is applied to actively growing weeds.

Second professional category.
