Date: 12.03.2025 Issue: 3/2025

Истинските биостимулатори от АГРЕДО

Теренова
Райса микс
Натурамин WSP
Натурамин Плюс
Натурамин Са/В
Натурамин Zn/Mn
Натурфос Zn/Mn
Натурфос Mg
Пленифлор
Спрейфикс
Натурфрут Калий
Натурхумус БИО
Цитоплант 400.

Бизнес център

For the benefit of all farmers, **AGREDO** offers a new generation of humic and organo-mineral fertilizers, which are recommended for improving soil fertility, for promoting and enhancing root development, and for increasing the availability and uptake of nutrients from the soil.

AGREDO continues its upward development and, as of May 2023, is part of the leading and dynamically developing modern company DAIMSA, a European producer of leonardite, a product of millions of years of humification of organic matter – a process that transforms plant and animal residues into a humus-rich material. Leonardite is characterized by a high content of organic matter, humic acids (up to 90% in dry matter) and microelements.

For a good start of your crops, AGREDO recommends that you begin with the following three products:

TERENOVA

High content of phosphohumates and phosphofulvates, primary nutrients, microelements, osmoprotective agents such as proline, serine, arginine and natural substances with hormonal activity that improve root development. TERENOVA is recommended for improving soil fertility, promoting and enhancing root development, and increasing the availability and uptake of nutrients from the soil.

ADVANTAGES

- Clean nutrition
- Strong roots, soil structuring
- Supplies plant-available phosphorus and releases it into the soil
- Activates beneficial microbial flora; stimulates growth
- Crop protector (reduces physiological slowdown under adverse conditions); increases cation exchange

TERENOVA improves soil fertility, promotes root development, and increases the availability and uptake of nutrients, especially phosphorus in the soil.

TERENOVA can be used both in mixtures with liquid fertilizers and independently during the vegetation period.

TERENOVA can be used in mixtures, but we strongly recommend that you first carry out trials to confirm compatibility.

For composition, rates and application, see [here](#)

NATURHUMUS – BIO is a natural source of organic matter. It improves the soil CEC and the availability and efficiency of fertilizers. It improves root growth and microbial activity in the soil. Soil is a complex system of interactions between the elements of animal, plant and mineral origin it contains. The organic matter in the soil, and in particular humic and fulvic acids, is the link between all these elements that will ensure and increase soil fertility. DAIMSA transforms products with a high concentration of fulvic acids, which are highly effective and easy for farmers to apply.

ADVANTAGES

- Improves the efficiency of mineral fertilizers.
- Corrects soil mineralization and salinization.
- Increases yield.

The application period for **NATURHUMUS – BIO** is from the beginning of vegetation, for good development of the root system, and throughout the active vegetation of the crops. It is recommended for both extensive and intensive crops: vegetables, fruit, vineyards, olives, citrus fruit, bananas, strawberries, ornamental plants, lawns and meadows.

Always carry out compatibility tests with other products

For composition, rates and application, see [here](#)

RAIZA MIX is a rooting biostimulant with a unique high-quality seaweed extract rich in auxins and phytohormones, combined with free amino acids and microelements.

RAIZA MIX has a very well-balanced aminogram with a predominance of important amino acids such as serine and proline, which help to overcome stress after transplanting. The presence of significant amounts of arginine has a stimulating effect on the development of the root system.

RAIZA MIX acts as a biostimulant of the root system and is particularly useful both for root development and for increasing the amount of nutrients absorbed.

RAIZA MIX contains a full range of natural phytohormones – auxins, gibberellins, cytokinins, betaines; osmoprotective agents, oligopeptides, polyamides and vitamins.
