BISMARK is a soil herbicide for oilseed rape and legumes that:

- ✘ Controls economically important weeds such as: red dead-nettle, mayweed, knotgrass, common lambsquarters, common poppy, field pansy, speedwell species, cleavers, shepherd's purse, spurge species, black-grass, fat-hen, ryegrass species, as well as other grass and broadleaf weeds.
 - ✦ Contains two active substances with different modes and spectra of action.
 - ✦ Ensures peace of mind that the crop develops without competition.
 - ✦ Innovative MICROPLUS formulation
- Provides longer-lasting activity of the product and uniform release of the active substances

- Improved selectivity towards the cultivated plants
- High efficacy against weeds

 Is also successfully used in PEAS, BEANS, FABA BEANS, CORIANDER, COTTON, POTATOES, RICE and other crops.

 **The result? A clean field, strong crop development = higher yield.**
