

Kwelex® – powerful control against broadleaf weeds

Author(s): Corteva Agriscience™

Date: 03.02.2026 Issue: 2/2026

For the third consecutive season, **Quelex®** from *Corteva Agriscience™* is proving to be the reliable solution for broadleaf weed control in cereal crops. Each year, more and more farmers choose Quelex® for its **high efficacy, excellent selectivity, and stability** under various weather conditions.

During the recent campaigns, marked by variable weather and frequent stress situations for the crops, **Quelex®** showed consistent results – even against overgrown weeds, sharp temperature fluctuations, and droughts.

The herbicide provides **complete control of broadleaf weeds**, including those that have developed resistance to traditional herbicides. Among them are **common poppy (Papaver rhoeas)**, **red dead-nettle (Lamium**

purpureum), **field larkspur (Delphinium consolida)**, and **cleavers (Galium aparine)** – some of the most common and economically significant weeds in cereal crops.

The unique active ingredient **Arylex™ Active**, part of the new chemical group *arylpicolinates*, provides a different mode of action, thanks to which Quelex® effectively controls even resistant species.

The product can be applied **both in autumn and spring**, at a rate of **5 g/da**, guaranteeing full effect at temperatures from **+5°C to +27°C**. Treatment can be carried out **from the first leaf to the flag leaf** – a flexibility that allows farmers to react according to the real field situation.

The first signs of action are observed **just a few hours after application**, when the weeds begin to show epinastic distortions and stop their growth. Complete kill occurs within **2 to 4 weeks**, during which time they cease to be competitive with the crop.

To achieve maximum effect under high weed pressure, the addition of the adjuvant **Vivol™** is recommended, which ensures better coverage and penetration of the active ingredient.

Quelex® is more than a herbicide – it is **reliability and efficacy under real conditions**, proven in practice over more than three seasons in Bulgarian fields.

Quelex® – a proven and flexible partner for clean crops and peace of mind in the field.
