AGREDO

AGREDO is a new company, but with extensive experience in modern agriculture. The objective is to provide active solutions to Bulgarian farmers. The choice of suitable seed is the most important task for every farmer, but a sober analysis of the industry in recent years has shown that success comes to those who limit stress and manage the production processes. AGREDO works actively in this direction – offering high-quality seed, overcoming stress and limiting the impact of adverse factors during vegetation with the support of international partners - DAYMSA and MOMONT. You are welcome to visit the AGREDO stand in Pavilion No. 13 at the International Agricultural Exhibition "AGRA" - from 24.02.2016 to 28.02.2016.

AGREDO's offers for 2016 are presented in detail in their new catalogue:

Biostimulants and foliar fertilizers – Part One

All living organisms require L-amino acids, which are the basic structural units for the formation of proteins, enzymes and the starting material for the synthesis of other essential substances.

- **NATURAMIN – WSP** is a product that has a stimulating effect on plants during the active phases of growth and flowering, especially in situations that may affect them adversely, such as root asphyxia, drought, hail, phytotoxicity caused by pesticides, etc.
- **NATURAMIN – PLUS:** Special liquid fertilizer, enriched with amino acids and with microelements chelated with gluconic acid, which is the main cofactor helping to achieve maximum effect in various metabolic processes.
- **PLENIFLOR:** Water-soluble seaweed extract with boron and molybdenum. It strongly improves the processes related to flowering and fruit set in both oilseed and vegetable crops.
- **NATURPHOS Zn/Mn:** Easily absorbed by plants, regardless of the method of application, with a remarkable systemic effect. Its application is recommended for crops sensitive to Zn and Mn deficiency, under soil conditions that block their uptake. Phosphorus participates in plant metabolism, improving its health status, and provides the essential nutrients for the formation of sugars, fruit set and ripening.
- **NATURPHOS Mg:** Regardless of the form of application, it is easily absorbed by plants and has a remarkable downward and upward systemic effect. Developed for use in the following crops: vineyards, fruit trees, strawberries and vegetable crops.
- **RAISA:** Seed treatment. Stimulates the development of the root system and improves the absorption of nutrients after transplanting and germination. RAISA contains: free amino acids, alginates, mannitol, oligosaccharides and polysaccharides, natural growth hormones, betaines, polyamines and vitamins. All these ingredients are derived from high-quality extracts of the seaweed *Ascophyllum nodosum*, while preserving their full action and effectiveness.
- **SPRAYFIX:** improves the quality of the working solution by imparting optimizing properties such as distribution, retention, fixation and penetration of the active substances on the surface of the treated crops.

Cereals and winter oilseed rape – Part Two

MOMONT has a wide and effective range of varieties and hybrids to meet market demand. The different breeding methods that are used aim to improve:

- The technological quality of varieties suitable for specific climatic conditions.
- Disease resistance and high performance under unfavorable growing conditions.

Through MOMONT, Bulgarian grain producers can become acquainted with cereal varieties and winter oilseed rape hybrids.

The strategy, based on the wide range of varieties and hybrids, is to offer different partners and clients the best service and suitable high-quality seed.

WHEAT

- EXOTIK
- BASMATI
- SOLEHIO
- PHENOMEN – NEW
- MODERN - NEW
- FORKALI – NEW
- KALLISOL

BARLEY

- GIGA
- CASINO
- FUNKY - NEW
- DOMINO – NEW

TRITICALE

- KOLOS

OATS**WINTER OILSEED RAPE HYBRIDS**
