With DuPont Crop Protection products, farmers not only unlock the potential of their crops, but also achieve the yields and quality they expect.

Dear farmers,

The time has come when, under real field conditions, we can show you the results we achieve by applying our products and crop protection programmes.

We would like to invite you to an Open Field Day, which will be held on **19 May 2016 at 11:00 a.m.** in the land of the town of Straldzha, Yambol region, in the fields of PCHZK Straldzha – Atanas Stoykov.

The new wheat, barley and triticale varieties from the Institute in Novi Sad will be presented, as well as crop protection products of DuPont Bulgaria.

You will be able to see the excellent results achieved through the application of one of DuPont's crop protection programmes for cereals – the herbicide Granstar® Super and the fungicide Credo® applied as the first treatment, and the new fungicide Acanto® Plus applied as the second treatment at the flag leaf stage of the crop.
