Effective proposals for pest control in agricultural crops from Summit Agro!

Infestations of economically important pests in the main agricultural crops have been established in various regions throughout the country – sunn pest and cereal leaf beetle in cereal crops, cabbage seedpod weevil in oilseed rape, alfalfa leaf weevil in alfalfa, weevils in emerging maize and sunflower, plum seed wasp, various weevil species and aphids in fruit crops, etc. This necessitates the implementation of plant protection measures in order to safeguard the crops and preserve their yield potential.

The company **Summit Agro** offers reliable and proven solutions for the control of the above-mentioned and many other pests in agricultural crops: **Sumi Alpha 5 EC**, **Oasis 5 EC**, **Mospilan 20 SG**, **Mospilan 20 SP**.

For more information, you may contact the specialists from the Summit Agro team.
