Profitable and reliable protection against economically important diseases, suitable for the first treatment of cereal crops.

Amistar Prime provides protection against the main diseases that can significantly compromise the yield potential of cereal crops.

The double systemic combination of Azoxystrobin and Fenpropidin has an exceptionally good synergy of the active substances, which contributes to the high efficacy against fungal pathogens.

The fungicidal effect of the product has excellent preventive and curative action against powdery mildew, septoria diseases and rusts.

ISSN 2815-522X

In addition to the excellent protection of cereal crops against diseases, the a.s. Azoxystrobin has an additional greening effect, which is extremely beneficial for the plants, especially in this stage of development.

Amistar Prime can also be applied at low temperatures of 5°C and above.

Amistar Prime – a top-class fungicide for reliable protection of cereal crops.

This season as well, you can obtain it even more advantageously in a package with a herbicide of your choice from Syngenta.

Amistar Prime – a unique combination with an excellent quality-to-price ratio!
